RESI S.p.A. turns 35

Rome, September 29 2022 - RESI S.p.A., the leading Italian company in the engineering, development and management of network monitoring systems, celebrates its 35th anniversary on the strength of innovation and technological independence built over time. The company, which is a partner of the major Service Providers, was founded by Mario Romani in 1987 and has grown until today, turning into a group that counts more than 160 highly qualified employees and customers distributed throughout Italy and in numerous countries worldwide.

Claudio Romani, CEO of RESI states: *"RESI is an adventure started 35 years ago; a company with a solid and far-sighted history. It is a very important milestone representing for us not a point of arrival, but rather a starting point toward even greater and more complex challenges. Our company distinguishes itself for its solid and transparent culture; today, to the sound values that characterize it, handed down from generation to generation, we add dynamism, innovation and the ability to adapt to an ever-changing market. We are ready to seize the opportunities of this new context by consolidating our presence in the Italian market and strengthening the existing plan of internationalization"*.

Since 1987, the company has been led by its management to the realization of its defining Vision, "Promoting the digitization of private and public organizations".

The skills of the company's management have enabled RESI to successfully innovate, grow and develop its business, effectively pursuing the Mission of "Designing and implementing complex solutions and systems taking care of the most evolved needs of the Customer".

"RESI's distinctive mark, as well as a pillar of the company's business development plan, is a keen eye for R&D, which has enabled us to satisfy our customers by developing solutions dedicated to their individual needs. To improve the quality of products and ensure their continuous evolution, the company intends to confirm and consolidate its willingness to invest in research and innovation through close cooperation on innovative projects between the in-house R&D department and leading academic institutions", Romani says.

About RESI S.p.A.

RESI S.p.A. has been a technology partner of leading Service Providers for over thirty years, preserving and enhancing their most important asset, the network. The experience and skills consolidated over the years, combined with constant investments in R&D, allow to turn the customer's actual needs into practice, by developing sophisticated ICT solutions for the management of 5G and 4G networks, and assuring a superior level of end-user quality of experience in a national and international context.

The company and its people stand out for their strong engineering know-how in the design, development and management of Service Assurance solutions based on proprietary Deep Packet Inspection technology, Quality Assurance in contact centres and Digital Transformation for both private and public companies.

A company that has always been forward-thinking: since its founding year RESI and its people have supported its customers by tackling revolutionary technological changes with them.

The complexity and comprehensiveness of its solutions have made it the pioneer in proactively monitoring and analyzing telecommunications networks and services that are evolving at a fast pace.

Thanks to its technological expertise, combined with specific competencies in the telco sector, RESI has signed important strategic partnerships, giving rise to an ecosystem that encompasses major players in the market. This has allowed the company to establish its market positioning, but also to develop a network of external relationships and collaborations that can enrich its competitive strengths and those of its partners.

"For its future, RESI is oriented toward the goal of a sustainable growth, with an increasingly extensive focus on the national context and the foreign markets of major interest. At the same time, we feel it is essential to pursue the R&D activity carried out over the past few years for new product design and continuous ongoing progress of existing ones", Romani further explains.
